

## BLANK CAPS

Blank caps and plugs are used to seal off water supplies and to prevent dirt getting into male and female connections.

They are available to suit all sizes of instantaneous, suction round thread and hydrant thread connections and are normally supplied with a chain unless otherwise requested for securing to the item being blanked off to ensure they are not lost when removed. Specials can be made to suit most other threads.

Instantaneous blank caps and plugs are available with a vent to enable the pressure to be released before removal.

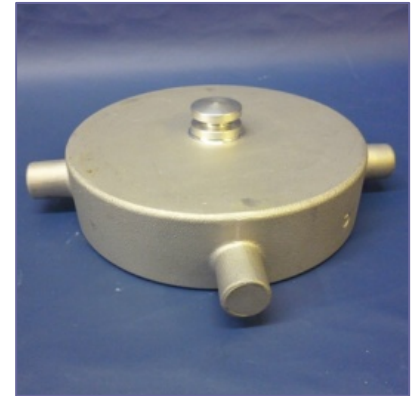

When ordering, the type and size of connection, plug, or cap, standard or vented, should be specified.

2 1/2" female instantaneous  
single twist

2 1/2" male instantaneous  
c/w pressure gauge

4" female round thread

2 1/2" male instantaneous

4" male round thread
