

COUPLINGS & ADAPTORS TO BS336

In light alloy or gunmetal

INSTANTANEOUS COUPLINGS

Couplings are used for connecting hoses together and to other fittings. The two halves snap together instantaneously and are held in position by two diametrically opposed spring operated plungers in the female half, which engage with an annular lip on the male half.

Couplings have a 2 ½" or 1 ½" gauge.
Tail sizes range from ¾" to 3" diameter.

Coupling spares comprise:-

Release knob, pull/plunger bolt, coil spring, nut and plastic cap.

ADAPTORS

Adaptors are used to convert from one connection system to another or from one size to another.

Almost any specific adaptor can be produced and pictured right are some standard items in regular production:-

- 2 ½" male instantaneous to male or female BSP
- 2 ½" female instantaneous to male or female BSP

In addition we offer:-

- Instantaneous to various flanges
- Ship to shore connections
- Instantaneous to suction round thread and hydrant threads
- Flanges to hose tails

Male instantaneos adaptors

Female instantaneos adaptors
