

## HOSE WASHER

Designed for connection to water delivery hose. For the cleaning of mud, gravel, sand and dirt. Soiled hose is pulled through the attachment, whilst the water connection to the washer feeds two internal pressure jets, which clean the outer jacket of hose. The impact of the water from the jets propels the hose forwards. Suitable for hoses with diameter up to 76mm.

Supplied with light alloy instantaneous male inlet as standard, other coupling type inlets available upon request.

Integral carrying handle is fitted to the body of the unit.
